

## Quick Net Program

The Out-of-Sight Quick Net program is designed to get you up and running with a wireless home network in a short amount of time, but will all the support and security that you need. A home network will enable all of your computers to:

- share broadband internet access,
- share printers and
- share files.

Our Service Technicians will take care of all of the installation, testing, training and documentation. You get more time to enjoy your new connectivity and the opportunity to ask questions of an expert.

The program includes network equipment for broadband connectivity, two desktop PC's and one laptop (additional equipment can be added). Firewall software is also included to augment the hardware firewall and ensure that your new network has complete security. We use only the highest quality hardware and software from companies such as: ORiNOCO, Toshiba, SMC, SpeedStream and ZoneAlarm. Consulting hours are included in the installation to ensure that everything is properly installed, tested and documented and most importantly that we have answered all of your questions.

Our goal is to get you up and running quickly, but also to provide a level of service and support unequalled in the industry. We understand that a network is of little value if it is not installed properly and if you don't know how to take full advantage of the capabilities.

### Standard Equipment List

- 1 - Wireless Residential Gateway
- 1 - Cable or DSL modem
- 1 - Wireless laptop network card
- 2 - Wired or wireless desktop network interface
